LIB Pack

Twenty-two mods in one jar, with a one-page tutorial for each. Players join with a plain vanilla client: everything is built from vanilla items, blocks and chest screens.

For server owners

1. Install Fabric Loader for Minecraft 26.3.
2. Put **Fabric API** and `lib-pack-2.2.0+mc26.3.jar` in the server's `mods/` folder.
3. Remove any separate jars of these mods. Worlds, balances and colonies carry over.

For players

1. Recipes unlock in your normal recipe book once you pick up an ingredient.
2. Every mod has a help command, e.g. `/cannon` or `/skills`.
3. Custom items look like vanilla items with a glint; their name tells you what they are.

Contents

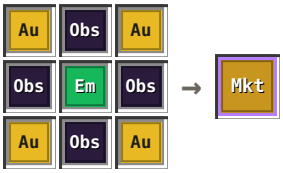

Market 2
Colonycraft 3
Ahoy 4
Burlap Sack 5
Cannon 6
Cargo Train 7
Flintlock 8

Overenchant 16
Fuck Illagers 17
Fossil Fool 18
Riches 19
Blimey 20
Sellswords 21
Tulpengekte 22
Specerij 23

01 Market

Sell anything for Marks (ℳ), buy it back at a markup, and flex with pallets of cash.

WHAT YOU NEED

Market

Au Gold Ingot · **Obs** Obsidian · **Em** Emerald

GET STARTED

1. Craft a **Market** and place it. It looks like a glowing lectern.
2. Right-click it and choose **Sell Items**. Drop your goods in the grid (or click **Add My Inventory**), then **Confirm Sale**.
3. Check your money with `/balance`. Send some to a friend with `/pay <player> <amount>`.
4. Choose **Buy Items** to shop by category. Left-click buys 1, right-click 8, shift-click a stack.
5. Rich? **Luxury & Vanity** sells cash stacks, gold bars and the Tycoon Trophy. They do nothing. That's the point.

GOOD TO KNOW

- `/worth` tells you what the item in your hand sells for.
- Buying costs at least twice the sell price, and rarer items cost more.
- `/withdraw <amount>` turns money into a banknote you can trade. Right-click a note to deposit it.
- Damaged tools sell for less; enchantments add value. Full shulker boxes are refused.

Commands: `/balance · /pay · /baltop · /withdraw · /worth`

02 Colonycraft

Found colonies, buy prefab buildings with Marks and let villagers gather for you.

WHAT YOU NEED

> No recipe: buy a **Colony Charter** for ₥2,500 with `/colonycraft charter`.

GET STARTED

1. Rename the charter in an anvil to name your colony, then right-click the ground. A **Town Hall** is built and claims the land around it.
2. Right-click the Town Hall's **lectern**. The **Buy blueprints** tab sells buildings by kind (start with a Residence for beds and a Farm); **Your buildings** is where you upgrade, staff and repair them.
3. Right-click inside your colony with a blueprint to see the outline, then click the same spot again to build it.
4. Every morning you pay wages (₥3 a worker) and the workers deliver to your Storehouses. Can't pay? Everyone strikes.
5. Add defences: curtain walls, wall stairs, wall towers for the corners, gatehouses, watchtowers with archers and a barracks with iron golems.
6. Build a **town street**: a Trading Post with master traders (emeralds), a Bank with a shared vault, a Museum for your relics, a Chapel, a Library with a maxed enchanting table, a Ranch, an Apiary and a Fuel Depot. The shop, bank and museum earn marks every day. With Proost: a **Distillery** and a **Tavern**. With De Compagnie: a **Company House**.

GOOD TO KNOW

- Every worker needs a bed, so build Residences first.
- Upgrade a **Residence** and its tenants pay rent: **₥15** a day at tier 2, **₥40** at tier 3.
- Turn on **autosell** at a Storehouse to sell its goods to the Market automatically. A staffed **Harbor Office** adds 5% per tier.
- Storehouses are **warehouses**: link them to your home warehouse and the harvest comes home. The harbor's pier is a **Loading Dock**, the **Train Station** loads Cargo Trains.
- Got a villager in a **Burlap Sack**? Give them an empty job for free. With Havana, buy a **Tobacco Farm**. With Sellswords, a **Guildhouse** hires mercenaries 20–50% cheaper.
- **Law and order:** buy Shackles (₥50), beat an illager under 40% health and shackle it. Jail it in a **Cellblock**, then ransom it or execute it on the **Scaffold** for 2–3× the bounty.
- **Headquarters** (₥6,000, one per player): its **Governor's Table** shows every colony, opens any Town Hall by letter, sends **convoys** between storehouses (a fee, days on the road, once or daily), gives colonies an optional **role**, and lets their mayors rehire the dead. No palace? Buy a **Governor's Desk** (₥750), put it in your own house and click **Govern from this desk**: same charter, your house is the HQ.
- The table's **treasury** is the whole pack's: colonies, Compagnie wages and loans, the Heeren's upkeep, pacts and tribute, and tomorrow's bills. Playing the Heeren? Their armies **besiege** colonies at war; a **Fortress** role shrugs it off.
- Needs the Market mod (it's in the pack).

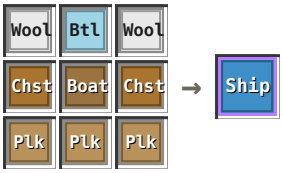

Commands: `/colonycraft` · `/colonycraft charter`

03 Ahoy

A two-masted sailing ship in a bottle: captain + 8 passengers, two 54-slot holds and wind.

WHAT YOU NEED

Ship in a Bottle

Wool Any Wool · **Btl** Glass Bottle · **Chst** Chest · **Boat** Any Boat · **Plk** Any Planks

GET STARTED

1. Optional: rename the bottle in an anvil. That's your ship's name, painted on the stern.
2. Right-click **open water** (about 7 × 20 blocks). The stern starts where you click; the bow points where you look.
3. Right-click the ship to board. The owner takes the wheel; friends get the benches.
4. Sail with **W/S**, steer with **A/D**, ring the bell with **Space**. **Shift** to get off.
5. Menu → **Shipwright**: refits for speed (3 levels, up to +60%), cargo (holds C and D, up to 216 slots) and a **canal drill**. Switch the drill on in the ship menu and the ship cuts a water-filled canal through land. It never cuts chests or bedrock, but it does cut houses!
6. Menu → **Gun deck**: slot Cannons into the four gun ports, then man one from the same menu.
7. Menu → **Bunks**: slot a bed into one of the two berths on the foredeck, then lie down at night. Sleep while anchored; Shift gets you up.
8. Done sailing? Open the menu and choose **Bottle it up**. Name, cargo and cannons stay inside.

GOOD TO KNOW

- Sailing with the wind is full speed, against it half speed. Following **Sellswords** mercenaries take passenger seats.
- Nobody aboard can be hurt, and drowned, guardians and phantoms get zapped.
- Passengers can fish, shoot, throw, eat and use blocks and mobs in reach: right-click does what it does ashore.
- Menu: right-click with an empty hand while aboard (or `/ahoy menu`), or sneak + right-click from outside. It has the cargo holds and the lock.
- Moor near a Warehouse **Loading Dock** to unload in one click.

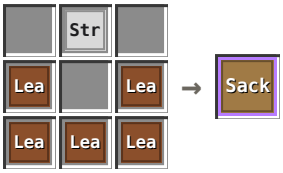

Commands: `/ahoy · /ahoy menu`

04 Burlap Sack

Bag villagers and wandering traders and let them out where you want them.

WHAT YOU NEED

Burlap Sack

Str String · **Lea** Leather

GET STARTED

1. Hold the sack in your main hand and right-click a villager or wandering trader.
2. Carry them home. The sack's name tells you who's inside ("Bob, a level 3 farmer").
3. Right-click a block to let them out. They climb out facing you, trades and levels intact.
4. Give a new villager without trades a workstation nearby, or they'll drop their job.

GOOD TO KNOW

- Iron golems within 24 blocks will come for you when you bag someone.
- Captives charge you a bit more for a few days. The grudge fades.
- Wandering traders you move never despawn.
- One sack holds one captive. Drop it in lava and they're gone.

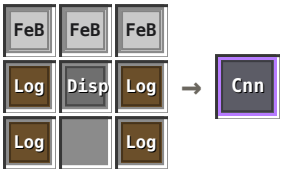

Commands: `/burlapsack`

05 Cannon

An aimable cannon you build, place and man. Blasts mobs, never your base.

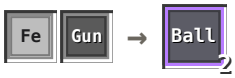

WHAT YOU NEED

Cannon

FeB Block of Iron · **Log** Any Log · **Disp** Dispenser

Cannonball any shape

Fe Iron Ingot · **Gun** Gunpowder

GET STARTED

1. Right-click the ground with the cannon. It points where you look.
2. Right-click the cannon to man it. Keep cannonballs in your inventory.
3. Look around to aim; the action bar shows elevation, range and ammo.
4. Press **Space** to fire. Reloading takes 2 seconds. **Shift** to get off.

GOOD TO KNOW

- At 45° a ball flies about 80 blocks.
- The blast is creeper-sized and hurts mobs and players, but never breaks blocks.
- Friendly fire is on. Don't shoot the wall in front of you.
- Sneak + right-click to pick the cannon up again (owner only).

Commands: `/cannon`

06 Cargo Train

A self-driving locomotive with up to 4 wagons that shuttles between station chests.

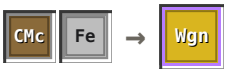

WHAT YOU NEED

Cargo Train any shape

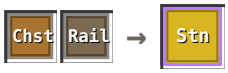

FMc Minecart with Furnace · **CMc** Minecart with Chest · **RsB** Block of Redstone

Cargo Wagon any shape

CMc Minecart with Chest · **Fe** Iron Ingot

Pickup Station any shape

Chst Chest · **Rail** Rail

GET STARTED

1. Lay a line of rails (at least 4 straight where the train goes down).
2. Put a **Pickup Station** chest next to the track at one end and a **Drop-off Station** at the other. Sneak + right-click a station (empty hand) to switch its mode.
3. Right-click a rail with the Cargo Train. It drives to the end, turns around and keeps going.
4. It stops at every station for 3 seconds to load or unload.

GOOD TO KNOW

- You can also rename any chest or barrel: "Pickup Station", "Drop-off Station" or "Swap Station".
- Right-click a standing train with a **Cargo Wagon** to add one (up to 4).
- A running train keeps its chunks loaded, so it works while you're away.
- Give each train its own line. Two trains drive straight through each other.

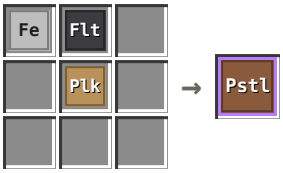

Commands: `/train`

07 Flintlock

Black-powder pistols, muskets and blunderbusses. Hit hard, reload slowly.

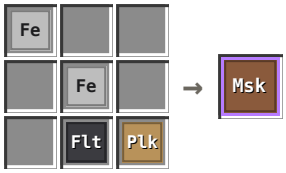

WHAT YOU NEED

Flintlock Pistol

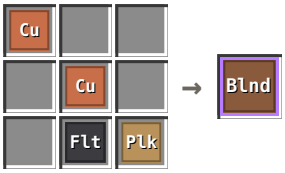

Fe Iron Ingot · **Flt** Flint · **Plk** Any Planks

Musket

Fe Iron Ingot · **Flt** Flint · **Plk** Any Planks

Blunderbuss

Cu Copper Ingot · **Flt** Flint · **Plk** Any Planks

Paper Cartridge any shape

Ppr Paper · **Gun** Gunpowder · **Nug** Iron Nugget

Scattershot any shape

Ppr Paper · **Gun** Gunpowder · **Flt** Flint · **Grv** Gravel

GET STARTED

1. Pistol and musket shoot **Paper Cartridges**; the blunderbuss shoots **Scattershot**.
2. Right-click with an empty gun and **keep holding it** until the reload bar fills (pistol 2 s, blunderbuss 3 s, musket 4 s).
3. Right-click to fire.

GOOD TO KNOW

- Musket: 18 damage, about 100 blocks. Pistol: 9. Blunderbuss: up to 20 point-blank, and it knocks you back.
- A gun stays loaded until fired: load four pistols before a fight, like a proper pirate.
- Guns wear out (one point per shot). Repair in an anvil with iron (copper for the blunderbuss). Mending works.
- Shields block shots. With Skills, guns level Marksmanship: it speeds up reloads, and Recovery can make one free.
- Enchant guns at a table or anvil: Power (+15% damage a level), Punch, Flame, Quick Charge, Piercing, Multishot, Infinity.

Commands: `/flintlock`

08 Havana

Grow tobacco, cure it in a barrel, roll cigars and smoke them.

WHAT YOU NEED

Curing Barrel any shape

Brl Barrel · **Hay** Hay Bale

GET STARTED

1. Break grass and ferns. About 1 in 12 drops **Tobacco Seeds**. Plant them on farmland.
2. When ripe, the plant shoots up 2 blocks. Break it for 3–5 **Tobacco Leaves**.
3. Put the leaves in a **Curing Barrel**. After one Minecraft day they're **Cured Tobacco**; two more days makes **Aged Tobacco**.
4. Hold tobacco and right-click a crafting table: **3 tobacco = 1 cigar**. Add honey, cocoa, berries, glow berries or blaze powder for a flavour.
5. Light it with flint and steel in your other hand (or a campfire or torch), then right-click to puff. 8 puffs per cigar.

GOOD TO KNOW

- Cigars give Regeneration; the Gran Reserva (aged) adds Resistance and Hero of the Village.
- Flavours: honey → Absorption, cocoa → Haste, berries → Speed, glow → Night Vision, blaze → Fire Resistance.
- Puff three times fast and you cough. Lit cigars go out underwater.
- The Market pays more at every step: leaf ₥1.50, cured ₥3, aged ₥7, a cigar ₥12, a Gran Reserva ₥30, +₥3 for a flavour.
- Any barrel or chest named "Curing" or "Humidor" works too, and it keeps curing while you're away.

Commands: `/havana`

09 Proost

Ferment mash, distill genever, whisky, rum and brandy, age it in oak casks and drink it.

WHAT YOU NEED

Mash Tun any shape

Brl Barrel · **Wtr** Water Bucket

Oak Cask any shape

Brl Barrel · **Fe** Iron Ingot

GET STARTED

1. Put **wheat**, **sugar cane** or **apples** in a **Mash Tun**. Half a day later each one is a **Mash**.
2. Build a still: a **cauldron** on a lit campfire (or fire, lava, magma, a lit furnace).
3. Hold mash, carry a **glass bottle** and right-click the still: **8 mash = 1 bottle**. Sneak to do 8 at once.
4. Grain → **Whisky**, or **Jonge Genever** with sweet berries in your other hand. Cane → **White Rum**. Apple → **Brandy**.
5. Optional: two days in an **Oak Cask** ages full bottles into Oude Genever, Aged Whisky, Dark Rum and Brandy VSOP.
6. Right-click a bottle to drink. 4 swigs each; you get the glass bottle back.

GOOD TO KNOW

- Genever: Strength (*Dutch Courage*). Whisky: Resistance. Rum: Water Breathing. Brandy: Haste. Aged ones do more.
- Every swig makes you drunker. Tipsy is fine; drunk, the world spins and you stagger; keep going and you pass out. `/proost drunk`
- Sells at the Market: ₥5–7 a bottle, ₥14–18 aged. With Skills it's **Connoisseur**, like Havana.
- Colonycraft: a **Distillery** bottles your colony's grain every morning, a **Tavern** pours it for 150% and its barkeep sells you a bottle.

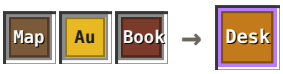

Commands: `/proost · /proost drunk`

10 De Compagnie

Run a shady VOC trading company: agents, jobs, telegrams and moneylending, from a Company Desk.

WHAT YOU NEED

Company Desk any shape

Map Cartography Table · **Au** Gold Ingot · **Book** Book

GET STARTED

1. Place the **Company Desk** and right-click it. Hire an **agent** at the Hiring Board: Force, Coin and Guile, a trait or two, a daily wage.
2. Pick a job on the **Job Board**: trade, raid, explore or something shady. 36 of them, bigger ones as you grow.
3. Choose an advisor: **De Kapitein** (force), **De Koopman** (coin) or **De Spion** (guile). Pick a stake (lean, standard, lavish) and an agent, and send them.
4. Every dawn (a Minecraft day), jobs come home: **triumph, success, partial, failure or disaster**. Marks to your balance, spoils to the **Strongbox**.
5. Answer **telegrams** from the road: pay up, press on, or gamble.
6. Lend money on **the Ledger**. Defaulters get a collector, or get sold to Leonard the Usurer.

GOOD TO KNOW

- Exploring jobs bring back a **Company Chart** to a real structure nearby: a wreck, a buried treasure, a village, a Hamlets castle...
- Agents get wounded, captured (pay the ransom or plan a rescue) or killed. Cowards run; Drunkards are cheap.
- Grow from a Charter to the **VOC**: more job slots, more agents, bigger loans. With Skills, it levels **Enterprise**.
- With the other mods: export your genever and cigars, charter out your ship, survey for oil, bring settlers home in sacks, find relics. A Colonycraft **Company House** adds a job slot and cuts wages.

Commands: `/compagnie · /compagnie news · /compagnie telegrams`

11 De Hooghe Heeren

Rival houses for your Compagnie: trade with them, plot against them, feast them, or go to war and lead your regiments in the field.

WHAT YOU NEED

Audience Bell any shape

Bell Bell · **Au** Gold Ingot · **Ppr** Paper

GET STARTED

1. It's **optional**. Open your **Company Desk**, click the **banner tab** in the top-right corner and **take your seat**: three to five rival houses, each with a treasury, an income and regiments. (Leave again at peace: `/heeren leave`.)
2. They play by your rules: income pays regiments (**₥500** each, **₥25 a day**), and **no treasury means no army**. Every dawn each house does one thing it planned.
3. Open a **dossier**: gifts, trade and peace pacts, alliances, tribute, war and peace. Their **opinion** of you comes from what they remember.
4. Send your Compagnie **agents** on errands: spy, sabotage, bandits, burglary, bribery, forged letters, assassination.
5. At war, the armies skirmish every dawn. When a **battle** is set, be at the field at **noon** and fight in it yourself: it decides the day.
6. Ride to a rival's **seat** to talk in person, or hang an **Audience Bell** and invite them to your hall.

GOOD TO KNOW

- **Honour** (keeping your word) wins pacts; **Fear** makes demands stick. Diplomat, Iron Ruler, Cutthroat... or the Snake.
- Spy on a house to see its real purse, army, temperament and **plans**. Rumours leak anyway.
- Feast your guests with food, Proost spirits and Havana cigars (not the spirits for a Pious one). Or bar the doors: they never forget.
- At war, storm their seat: break the garrison, then loot the treasury chest by the high table.
- With Colonycraft, their riders take **convoys** and their armies **besiege** your colonies: win the battle at the walls to lift it. Bring your **Sellswords**: they fight the rival's men. Skills: **Statecraft**.

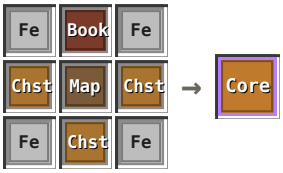

Commands: `/heeren` · `/heeren join` · `/heeren court` · `/heeren dispatches`

12 Warehouse

Big, sorted storage: tens of thousands of items, fed by hand, hoppers, trains and ships.

WHAT YOU NEED

Warehouse Core

Fe Iron Ingot · **Book** Book · **Chst** Chest · **Map** Cartography Table

Storage Rack any shape

Brl Barrel · **Chst** Chest · **Fe** Iron Ingot

Loading Dock any shape

Lntn Lantern · **Chst** Chest · **Lead** Lead

GET STARTED

1. Place a **Warehouse Core** (rename it first to name the warehouse). It holds 2,048 items.
2. Place **Storage Racks** against it, and more against those (sneak to place a rack on a rack). Each adds 4,096.
3. Right-click the core or a rack to open it. Tabs, sorting and search are on the bottom row.
4. Deposit: drop items on the stock, shift-click from your inventory, or click **Deposit your backpack**.

GOOD TO KNOW

- Hoppers into a rack, a chest named **Warehouse Intake**, or a train's Drop-off Station touching it all fill it automatically.
- A **Loading Dock** on your pier unloads Ahoy ships into nearby warehouses.
- A Fossil Fool **Drill Rig** within 16 blocks of the core unloads its ore and stone onto the shelves by itself.
- Make specialist warehouses (food only, ores only) in Settings.
- Settings → **Network**: make it a branch of a central warehouse. Open branches from the centre, and let them send their stock home.
- Break the core to pack it up. The stock stays inside.

Commands: `/warehouse · /warehouse list`

13 Skills

Elder Scrolls style skills: you get better at things by doing them.

WHAT YOU NEED

> No recipe: just play. Type `/skills` to open the menu.

GET STARTED

1. Do things. Mining levels Mining, fighting levels Combat, sailing levels Sailing, and so on. 24 skills, levels 0–100.
2. Every level gives a small passive bonus. Level 100 is about twice as good as a beginner.
3. Every 10 levels you earn a **perk point** for that skill. Open `/skills`, click the skill, click a perk.
4. Each skill has 3 perks × 5 ranks but only 10 points, so choose.

GOOD TO KNOW

- Vein Miner and Timber only work while you **sneak**.
- **Shield**: block hits to learn it. **Shield Bash** knocks them back, **Riposte** hits harder right after, **Second Wind** heals from what you block.
- Blocks you placed yourself give no XP. No cheesing.
- Changed your mind? **Forget perks** on a skill page (costs 5 XP levels).
- `/skills top <skill>` shows the leaderboard. Mercantile raises your Market prices.
- Mod skills: **Wildcatting** (Fossil Fool), **Artillery** (Cannon), **Bounty Hunting** (Fuck Illagers), **Governance** (Colonycraft), **Connoisseur** (Havana and Proost), **Piloteering** (Blimey), **Leadership** (Sellswords), **Enterprise** (De Compagnie), **Statecraft** (De Hooghe Heeren) and **Treasure Hunting** (structure chests and Riches relics).

Commands: `/skills · /skills top`

14 Hamlets & Horrors

Random cottages, castles and dungeons. Some lived in by villagers, some overrun by monsters.

WHAT YOU NEED

> Nothing to craft: they generate in **new, unexplored terrain**.

GET STARTED

1. Travel somewhere you've never been. Structures only appear in chunks generated after the mod was installed.
2. **Cottages** and **castles** with villagers are safe: no monsters spawn inside.
3. **Haunted cottages** and **ruined castles** are full of monsters, and bandits camp in the ruins. Bring armour.
4. **Dungeons** start at a crypt on the surface; a spiral stair leads 16 blocks down to a prison, a crypt, a treasury and a library.

GOOD TO KNOW

- Press the stone button in front of a cell door to free the prisoners.
- Haunted cottages have a zombie villager you can cure.
- Cottages appear about every 20 chunks, dungeons every 28, castles every 44.
- Ops can find one with `/locate structure hamlets:castle` (or cottage, dungeon…).

Commands: `/hamlets`

15 Overenchant

Raises the maximum level of every enchantment to X: Sharpness X instead of V, Protection X instead of IV.

WHAT YOU NEED

> No recipe: it works on every enchanting table, anvil and book. Type `/overenchant` to see what went up.

GET STARTED

1. Enchant as usual. Every enchantment with more than one level can now reach X: Sharpness V becomes X, Protection IV becomes X, Knockback II becomes X.
2. The enchanting table offers the new levels. Sharpness X costs what V used to, so a level 30 table with bookshelves hands out VIII to X.
3. To climb by hand, put two books (or items) with the same enchantment at the same level in an anvil. Two Sharpness IX give Sharpness X.
4. Mending, Silk Touch, Infinity and other one-level enchantments stay at I.
5. Flintlock guns can be enchanted too, so Power X, Quick Charge X and Piercing X are real.

GOOD TO KNOW

- The anvil still says "Too Expensive!" at 40 levels, so plan your books.
- Ops: `/enchant @s minecraft:sharpness 10` works now.
- Enchanted items you already have keep their levels, and can now be raised.
- Admins can change the levels in `config/overenchant.json`. Keep them at X or lower unless everyone has the mod on their client.

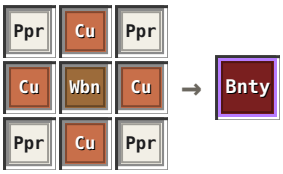

Commands: `/overenchant`

16 Fuck Illagers

Bounty hunting: illagers drop fingers, a Bounty Station buys them and posts contracts on named illager bosses.

WHAT YOU NEED

Bounty Station

Ppr Paper · **Cu** Copper Ingot · **Wbn** Crafting Table

GET STARTED

1. Craft a **Bounty Station** (paper, copper, a crafting table) and place it. Right-click it to open it.
2. Kill illagers. Each one a player kills drops an **Illager Finger** (pillagers and vindicators 1, evokers 2). The station pays ₥3 each: **Sell trophies**.
3. Take a contract: **Easy** (a wagon or watchtower, ₥150), **Medium** (a war camp or fortress, ₥400) or **Hard** (a dungeon or castle, ₥1,000). You get coordinates and a **Wanted Poster**.
4. Ride out. The target hides 1000–2000 blocks away. Hold the poster to see how far and which way. The hideout is built as you get close: guards, loot chests, sometimes a prisoner in a cage.
5. Kill the named boss and pick up its **skull**. Sell it at any Bounty Station for the reward.

GOOD TO KNOW

- One contract at a time. Abandon it at the station if it's too much (no reward).
- Bosses are tougher than normal: 40 health on Easy, 80 on Medium, 140 on Hard. Hard bosses are evokers. Bring a shield for the vexes.
- The dungeon is 16 blocks down a ladder. The castle's boss waits upstairs in the keep, past a ravager.
- Raid farms count as illagers too. Your fingers, your call. Kills by your **Sellswords** mercenaries drop fingers too.
- Ops: `/bounty build castle` builds a hideout where you stand (for testing, no skull).

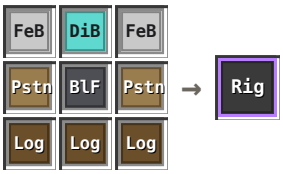

Commands: `/bounty`

17 Fossil Fool

Old-timey oil: dowse for it, sink a 5×5 shaft with a Drill Rig, strike crude, tank it, refine it into diesel and burn it.

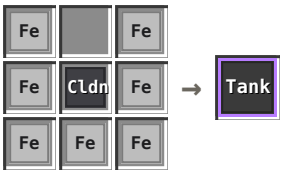

WHAT YOU NEED

Drill Rig

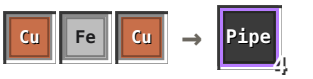

FeB Block of Iron · **DiB** Block of Diamond · **Pstn** Piston · **BlF** Blast Furnace · **Log** Any Log

Oil Tank

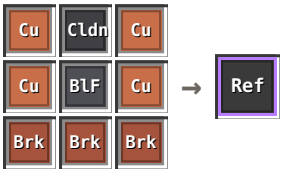

Fe Iron Ingot · **Cldn** Cauldron

Pipe

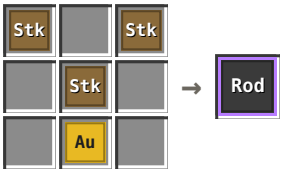

Cu Copper Ingot · **Fe** Iron Ingot

Refinery

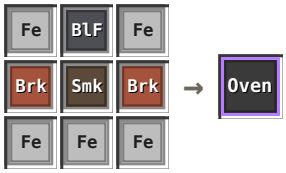

Cu Copper Ingot · **Cldn** Cauldron · **BlF** Blast Furnace · **Brk** Bricks

Dowsing Rod

Stk Stick · **Au** Gold Ingot

Industrial Oven

Fe Iron Ingot · **BlF** Blast Furnace · **Brk** Bricks · **Smk** Smoker

GET STARTED

1. Right-click with the **Dowsing Rod**. It twitches towards the nearest oil pocket: which way, how far, how deep. Walk until it points straight down.
2. Right-click the ground with the **Drill Rig**: a **5×5 shaft** to bedrock. Click the **seabed** through water and it goes **offshore** on a deck with a cofferdam.
3. Right-click the derrick (anyone can) and put fuel in the **firebox** (row 2). Ores land in rows 3–4, stone in rows 5–6.
4. When it hits a pocket: **STRUCK OIL!** It pumps the pocket dry into its tank and into any **Oil Tank** within 9 blocks, then keeps drilling.
5. Put a **Refinery** next to the tank. With fuel in its firebox it turns 2 crude into 1 diesel, back into an empty tank.
6. Too far? Lay **Pipes** from the ring around the shaft: tanks, refineries, ovens and chests on the line are linked.

GOOD TO KNOW

- Fuel ladder: **coal** 2 blocks (0.5×) → **lava** 40 (0.75×) → **crude** 60 (1×) → **diesel** 200 (1.5×).
- Tanks hold **crude, diesel, water or lava**; sneak + right-click with an empty hand picks one. Empty fireboxes burn fuel from the tanks.
- **Rig Workshop** (the anvil in the rig's screen): pay materials for a **7×7 or 9×9 shaft**, a faster engine, better fuel use and bigger holds.
- The **Industrial Oven** burns diesel and smelts a stack in seconds; **ores come out double**. Sell crude (m40) and diesel (m100) at the Market.

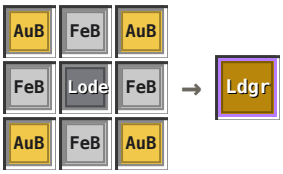

Commands: `/fossilfool`

18 Riches

Show off: a walk-in vault where your Market balance piles up in gold, locked vault doors, display cases with plaques, and 48 one-of-a-kind relics.

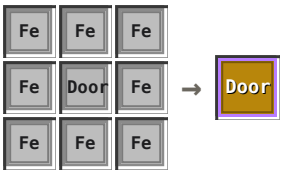

WHAT YOU NEED

Vault Ledger

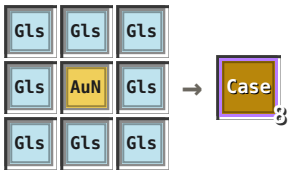

AuB Block of Gold · **FeB** Block of Iron · **Lode** Lodestone

Vault Door

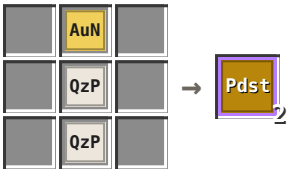

Fe Iron Ingot · **Door** Iron Door

Display Case

Gls Glass · **AuN** Gold Nugget

Pedestal

AuN Gold Nugget · **QzP** Quartz Pillar

GET STARTED

1. Build a vault room with a clear floor and put the **Vault Ledger** in the middle.
2. Your **Market balance piles up around it in gold**: a scattering at ₥1,000, waist-deep at ₥100,000. Walk in and wade.
3. Hang a **Vault Door**. It opens only for you and the players you `/riches trust`, and swings shut by itself.
4. Right-click a **Display Case** or **Pedestal** with an item to put it on show under a brass plaque. Empty hand takes it back.
5. Hunt the **48 relics**: `/riches relics` shows who found what, and hints for the rest.

GOOD TO KNOW

- Each relic exists **once per server**. Whoever finds it first has the only one. Don't drop it in lava.
- Relics come from mobs a player kills (evokers, the Wither, glow squid…), mined blocks (ancient debris, deepslate…) and the first look in structure chests.
- Show a whole collection of 6 in your own cases and the **Royal Society pays ₥5,000**.
- Relics can't be sold to the Market. Trade them with players instead. Needs the Market mod (it's in the pack).

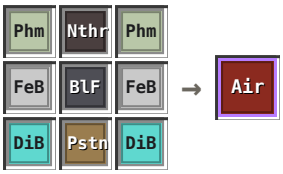

Commands: `/riches` · `/riches relics` · `/riches trust`

19 Blimey

A riveted iron airship that runs on diesel, and small, big and huge bombs that wreck buildings. Expensive to build, expensive to fly.

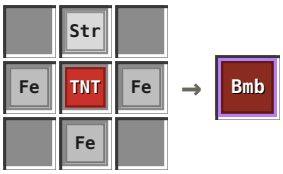

WHAT YOU NEED

Flat-Pack Airship

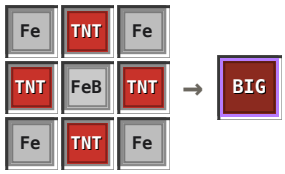

Phm Phantom Membrane · **Nthr** Netherite Ingot · **FeB** Block of Iron · **BlF** Blast Furnace · **DiB** Block of Diamond · **Pstn** Piston

Small Bomb

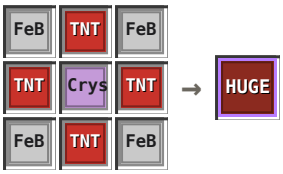

Str String · **Fe** Iron Ingot · **TNT** TNT

Big Bomb

Fe Iron Ingot · **TNT** TNT · **FeB** Block of Iron

Huge Bomb

FeB Block of Iron · **TNT** TNT · **Crys** End Crystal

GET STARTED

1. Optional: rename the **Flat-Pack Airship** in an anvil. That's your airship's name, painted down both flanks.
2. Right-click the ground with it. It needs about 9 × 26 blocks of clear ground and 14 blocks of sky. The bow points where you look.
3. Sneak + right-click it, open the **Fuel tank** and put in Buckets of **Diesel** from a Fossil Fool Refinery. No diesel, no flying.
4. Right-click it to board. **W/S** throttle, **A/D** turn, **Space** climb, **Ctrl** descend. Let go and it holds its height. **Shift** gets you off (a parachute, if you're up high).
5. Hold a bomb and right-click while aboard: it drops out of the hatch and goes off on whatever it hits. It keeps the airship's speed, so let go early.

GOOD TO KNOW

- One bucket of diesel is about **5 minutes cruising**, 14 hovering. Climbing and racing burn more. Run dry and it sinks gently to the ground.
- Menu → **Engineer**: Engines (up to +80% speed), Fuel economy (up to −50% diesel), Cargo holds (two 54-slot holds to start, up to five). With Skills, **Piloteering** levels as you fly and bomb, and steering a happy ghast counts too. Paid in netherite, diamonds, blaze rods and ghast tears.
- Bombs: small 4 (TNT), big 7, huge 12. On foot, right-click a block to set one with a 4-second fuse. Unlike cannonballs, they break blocks.
- **Sneak** + right-click to **plant** a bomb unlit: **redstone**, **flint and steel**, fire or a nearby blast sets it off. Booby traps, demolition chains. Punch it to take it back.
- Crew aboard take no blast, fall or fire damage. Menu → **Lower the rope**: passengers climb down to put boots on the ground while you fly; people below right-click its end to be hauled up. Land, then menu → **Fold it up** to carry it.

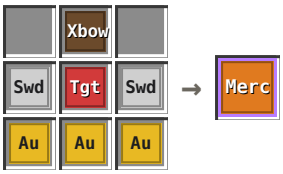

Commands: `/blimey · /blimey menu · /blimey tank`

20 Sellswords

Hire Dutch mercenaries with crossbows and swords. They follow you, hold a spot, hunt with you, guard your walls and villagers, and die for good.

WHAT YOU NEED

Mercenary Station

Xbow Crossbow · **Swd** Iron Sword · **Tgt** Target · **Au** Gold Ingot

GET STARTED

1. Craft a **Mercenary Station** and place it. Right-click it and **hire a Recruit** for ₥250. They bring their own crossbow, sword and orange tunic.
2. Right-click a mercenary with an **empty hand** for their menu: **Follow me**, **Hold this spot** (like telling a dog to stay), **Back to the station**, **Hunting** and **Dismiss**.
3. Following, they fight whatever attacks you and whatever you hit (a hunting party), climb aboard your ship or airship with you, and come through portals.
4. Promote them with **gold ingots** in the same menu: 5, 10, 20, then 40. The first promotion picks a path for good: **Ranged** ends as a **Musketeer**, **Melee** as a **Foestopper Bulwark**.
5. Blow a **goat horn** to rally everyone within 48 blocks, or to make your followers hold where they stand. **Sneak** and blow it: **Charge!** at whatever you're looking at.

GOOD TO KNOW

- Idle mercenaries patrol **50 blocks** around their station and protect it and its villagers. Hold-this-spot on a wall makes a fine archer post.
- They never hurt players, villagers, golems or pets, and their bolts fly straight past friends. They heal slowly. **Death is for good**.
- Log out and your followers guard where you left them. Die and they guard your things.
- A Colonycraft **Guildhouse** hires 20/35/50% cheaper and has a Bounty Station too. Mercenary kills drop illager fingers. With Skills: **Leadership** (bigger squad, cheaper promotions, harder hits, thicker skin). They join De Hooghe Heeren's battles too.

Commands: `/sellswords · /sellswords list · /sellswords rally · /sellswords charge`

21 Tulpengekte

Tulip mania, balanced: grow tulip bulbs, breed rare broken varieties, and sell them to the Bloemist.

WHAT YOU NEED

> No recipe: break a **tulip** (1 in 4 has a bulb under it), or buy common bulbs from a **Bloemist**.

GET STARTED

1. Right-click grass, dirt or farmland with a **bulb**. A sprout comes up. **No bone meal**: it flowers in about one Minecraft day.
2. Break the flower to **lift** it: the bulb comes back, plus **offsets** (a common bulb gives 0–2).
3. Now and then an offset **breaks**: a **Fine** tulip (1 in 20), a **Broken** one (1 in 100) or the **Semper Augustus** (1 in 1,000).
4. Make a **Bloemist**: hand a bulb to a villager without a job (a nitwit will do), or name-tag any villager "Bloemist".
5. Right-click him: he wants **three varieties** today and pays the Market price **+50%** for them. He also sells common bulbs.

GOOD TO KNOW

- Market prices: common ₥1, fine ₥20, broken ₥75, Semper Augustus ₥300.
- Broken tulips are weak: few offsets, and half revert to a common tulip. Nobody farms Viceroys by the acre.
- Every Bloemist wants the same thing on the same day, and only a few per player. `/tulpengekte wants` shows today's list.
- With Skills: lifting trains **Farming** (Green Thumb adds offsets), selling to the Bloemist trains **Mercantile**. Colonycraft farms dig up the odd bulb.

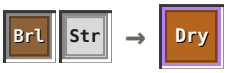

Commands: `/tulpengekte` · `/tulpengekte wants`

22 Specerij

Spices that only grow where they grow: pepper, nutmeg, cloves, cinnamon, tea and saffron. A Hortus to cheat the climate, a Drying Rack to finish them.

WHAT YOU NEED

Drying Rack any shape

Brl Barrel · **Str** String

GET STARTED

1. Go where the spice grows: **jungle** (pepper), **mangrove swamp** (nutmeg), **bamboo jungle** (cloves), **savanna** (cinnamon), **cherry grove** (tea), **meadow** (saffron).
2. Break grass and ferns there. About 1 in 25 gives a **cutting**. `/specerij here` tells you what grows where you stand.
3. Plant it in its home biome. Anywhere else only in a **Hortus**: a **glass roof** overhead and a **fire** going within 4 blocks. Half speed.
4. A day later it's ripe. **Right-click** to pick it; it grows back. Breaking it digs it up (you keep the cutting).
5. Put the fresh spice in a **Drying Rack**. A day later it's dried and worth about four times as much. Green tea left in two more days turns black.

GOOD TO KNOW

- No bone meal. Ripe pepper is a sweet berry bush: it pricks.
- Market, dried: pepper ƒ3, cloves ƒ3.50, cinnamon ƒ4, nutmeg ƒ6, green / black tea ƒ1.50 / ƒ3, saffron ƒ15.
- With Colonycraft: a **Spice Plantation** (Town Hall shop, *Homes and harvests*) grows the local spice. Double the yield at 5,000 blocks from your Headquarters.
- With Skills: picking trains **Farming**, and Green Thumb adds to the pick.

Commands: `/specerij` · `/specerij here`
